

## Program Manager

An NIH funded center, Nanotechnology Center for Mechanics in Regenerative Medicine, with labs in NY City, Philadelphia, Europe and Israel seeks an experienced Program Manager to coordinate this international consortium with the overall goal to improve immunotherapy through nanotechnology and cell mechanics. The Program Manager will need to learn the interdisciplinary approaches of the center labs and understand how these approaches relate to the focused goals of the center. The Program Manager will work with the center's executive committee and director to define and implement strategies to coordinate resources and tasks among the 12 research labs that make up the center. It is anticipated that the Program Manager will spend time at all the participating labs- necessitating 2-4 international trips per year. PhD and post-doctoral research experience in immunology and management training/experience is preferred.
